Polar Questions – Basics

- Most South Asian languages:
 - SOV default/basic word order
 - Yes/no (polar) questions do not have a different syntax from declaratives.
 - Question meaning is signaled via intonation
- This is also true for Urdu/Hindi.

- SOV declarative
- Falling intonation at the end.
- Broad focus (but pitch reset at *ko* due to the voiceless C)

- SOV yes/no (polar question)
- Rising intonation at the end.
- Broad focus (but pitch reset at *ko* due to the voiceless C)

Urdu Intonation of Basic Clause Types

- Intonational (right) boundaries differ according to clause type (Jabeen 2012).
 - Polar questions have a high boundary tone: H%
 - Declaratives have a low intonational phrase boundary and follow a low phonological phrase boundary, so: L- L%
 - *Wh*-constituent questions follow the same pattern: L- L%.

Polar Questions – Basics

- Urdu/Hindi also uses *kyaa* 'what' in polar questions.
- This is the same *kyaa* used in wh-questions.
- But the distribution differs:
 - Default position of polar *kyaa* is clause initial.
 - Default position of wh-question *kyaa* is immediately preverbal.

Polar Questions – Distribution

- *Polar kyaa*

kyaa anu=ne umaa=ko tohfaa di-yaa?
what Anu=Erg Uma=Dat present.M.Sg give-Perf.M.Sg
'Did Anu give a/the present to Uma?'

- *wh-kyaa*

anu=ne umaa=ko **kyaa** di-yaa?
Anu=Erg Uma=Dat what give-Perf.M.Sg
'What did Anu give to Uma?'

Bhatt and Dayal (2015): *polar kyaa* and *wh-kyaa* are in complementary distribution.

- *Polar kyaa* can appear anywhere in the clause, but is difficult/unnatural in immediately preverbal position.
- *wh-kyaa* can appear anywhere in the clause, but every position except for the immediately preverbal position is marked.
- § = pragmatically marked, # = infelicitous

- *Polar kyaa*

(kyaa) anu=ne (kyaa) umaa=ko (kyaa) tohfaa
what Anu=Erg Uma=Acc present.M.Sg
(#kyaa) di-yaa (kyaa)?
give-Perf.M.Sg
'Did Anu give a/the present to Uma?'

- *wh-kyaa*

(§kyaa) anu=ne (§kyaa) umaa=ko (kyaa) di-yaa
Anu=Erg Uma=Acc give-Perf.M.Sg
(§kyaa) ?
'What did Anu give to Uma?'

Polar *kyaa* – Distribution

- Note:
 - we are not sure that the clause final *polar kyaa* is of the same type as the others.
 - this issue is still under investigation.
- Bhatt and Dayal (2015) note that *polar kyaa* and *wh-kyaa* cannot appear in the same clause.
- This makes sense, since the two mark very different question types.

Incompatibility of *Polar kyaa* & *wh-kyaa*

***kyaa** anu=ne umaa=ko **kyaa** di-yaa?

what Anu=Erg Uma=Acc what give-Perf.M.Sg

intended: 'What did Anu give to Uma?'

***kyaa** kis=ne umaa=ko tohfaa di-yaa?

what who=Erg Uma=Acc present.M.Sg give-Perf.M.Sg

intended: 'Who gave Anu the present?'

Role of *Polar kyaa*?

- Crosslinguistically, many languages have question markers to mark a clause as a question.
- See Masica (1991) on this phenomenon in Indo-Aryan.
- Is *polar kyaa* a **question marker**?
- Reasonable hypothesis since:
 - Syntax does not distinguish between declaratives and questions.
 - Intonation is not always available (text, songs) and is not always reliable.

Against Question Marker Analysis (Dayal)

- Generally, question markers in Indo-Aryan appear either clause initially or clause finally.
- But *polar kyaa* can appear anywhere in the clause.
- It is also only compatible with some types of embedded clauses (Bhatt and Dayal 2015).
 - "rogative" predicates (Lahiri 2002) allow *polar kyaa*
 - others do not
- *Polar kyaa* always appears to be optional.
- So: not a typical question marker.

- *Rogative Predicate*

anu jaan-naa caah-tii hai
Anu know-Inf.M.Sg want-Impf.F.Sg be.Pres.3.Sg

[ki **kyaa** tum cai pi-yo-ge?]
that what you tea drink-2.Pl-Fut.M.Pl

‘Anu wants to know whether you will drink tea?’

- *Other Embedding Predicate*

*anu jaan-tii hai
Anu know-Impf.F.Sg be.Pres.3.Sg

[ki **kyaa** tum cai pi-yo-ge?]
that what you tea drink-2.Pl-Fut.M.Pl

intended: ‘Anu knows whether you will drink tea.’

Polar *kyaa* as Scope Marker

- Bhatt&Dayal (2015):
 - *polar kyaa* is in ForceP
 - constituents to the left of *polar kyaa* are **topicalized**
 - this material is **presupposed** and thus out of the scope of the question.
- Butt (2014):
 - *polar kyaa* is a type of focus-sensitive operator
 - partitions a clause into backgrounded/presupposed vs. open for further discussion.
 - items to the left of *polar kyaa* are presupposed
 - items to the right of *polar kyaa* are open for further discussion.

Clause Initial *polar kyaa*: Everything in Scope of Question (Bhatt&Dayal 2015)

kyaa anu=ne umaa=ko tohfaa di-yaa?
what Anu=Erg Uma=Dat present.M.Sg give-Perf.M.Sg
'Did Anu give a/the present to Uma?'

nahiiN, **asim=ne/asim=ko** di-yaa
no Asim=Erg/Asim=Dat give-Perf.M.Sg
'No, Asim did/No, to Asim.'

nahiiN, **xat** di-yaa
no letter.M.Sg give-Perf.M.Sg
'No, a letter.'

Clause Medial: Subject not available to be questioned (Bhatt&Dayal 2015)

anu=ne **kyaa** umaa=ko tohfaa di-yaa?
Anu=Erg what Uma=Dat present.M.Sg give-Perf.M.Sg
'Did Anu give a/the present to Uma?'

*nahiiN, **asim=ne** di-yaa
no Asim=Erg give-Perf.M.Sg
'No, Asim did.'

nahiiN, asim=ko/xat di-yaa
no Asim=Dat/letter.M.Sg give-Perf.M.Sg
'No, to Asim/No, a letter.'

Information Structure and Intonation

- Information Structure is known to be related to prosody.
- If the constituents to the left of *polar kyaa* are topicalized/presupposed, there should be an intonational correlate.
- If the clause is partitioned by *polar kyaa*, there should be an intonational correlate.

Questions:

- Polar questions with and without *polar kyaa*:
 - Meaning difference not clear when *kyaa* is clause initial.
 - Is there a difference in intonation contour?
- Polar *kyaa*:
 - How is the *polar kyaa* realized intonationally?
 - Is it realized differently according to position?
- Topicalization/Partitioning Hypothesis:
 - Does the overall intonation differ in accordance with the position of the *polar kyaa*? (By hypothesis it should!)

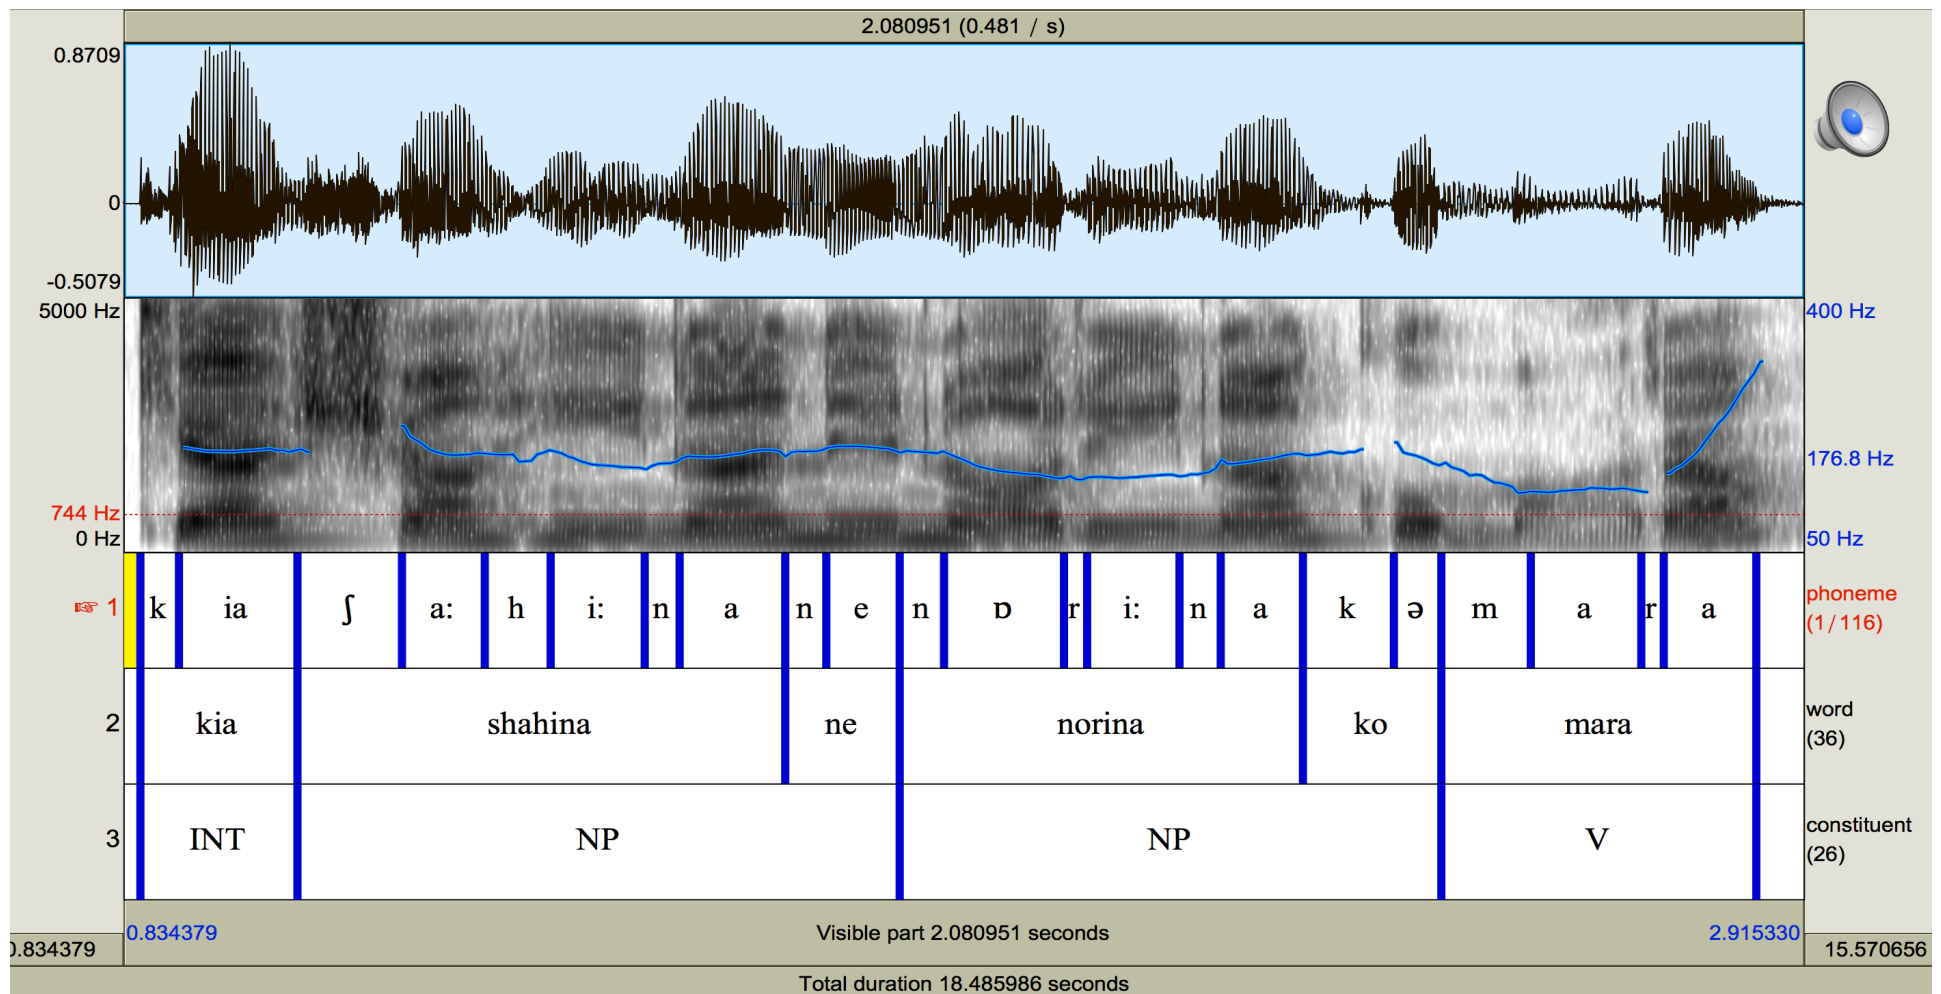

Some Answers:

- The *polar kyaa* is always realized with a flat pitch.
 - A simple polar question and one with *polar kyaa* **do not differ** in the overall intonational contour.
 - Differences in the overall contours do not correlate with the position of *polar kyaa*, but with what has been placed in **focus**.
- ➔ The topicalization hypothesis (Bhatt&Dayal 2015) is not supported by the intonational data.
- ➔ But the *polar kyaa* could still be partitioning the clause in some way.

- SOV yes/no (polar question)
- Rising intonation at the end of the sentence.
- Broad focus (but pitch reset at *ko* due to the voiceless C)

- SOV with clause initial *polar kyaa*
- Rising intonation at end, *kyaa* with flat pitch.
- Broad focus
- No significant differences to question without *polar kyaa*.

Recap:

- The *polar kyaa* is always realized with a flat pitch.
- A simple polar question and one with *polar kyaa* do not differ in the overall intonation contour.

Interaction with Focus:

- In order to understand the interaction with focus, some background information about Hindi/Urdu prosody is necessary.

Prosodic Hierarchy

I(ntonation) phrase (ι)

P(honological) phrase (ϕ)

Prosodic word (ω)

Prosodic Phrasing

- Every non-final content word forms a p-phrase (Patil et al. 2008)
- Every p-phrase contains a pitch accent (Moore 1965).
- Pitch accents are anchored to lexical stress.
- Lexical stress on the heaviest syllable from right to left in words in isolation (Hussain 1997).
- Lexical stress placement varies in sentence context (Ohala 1986, Mumtaz 2012).

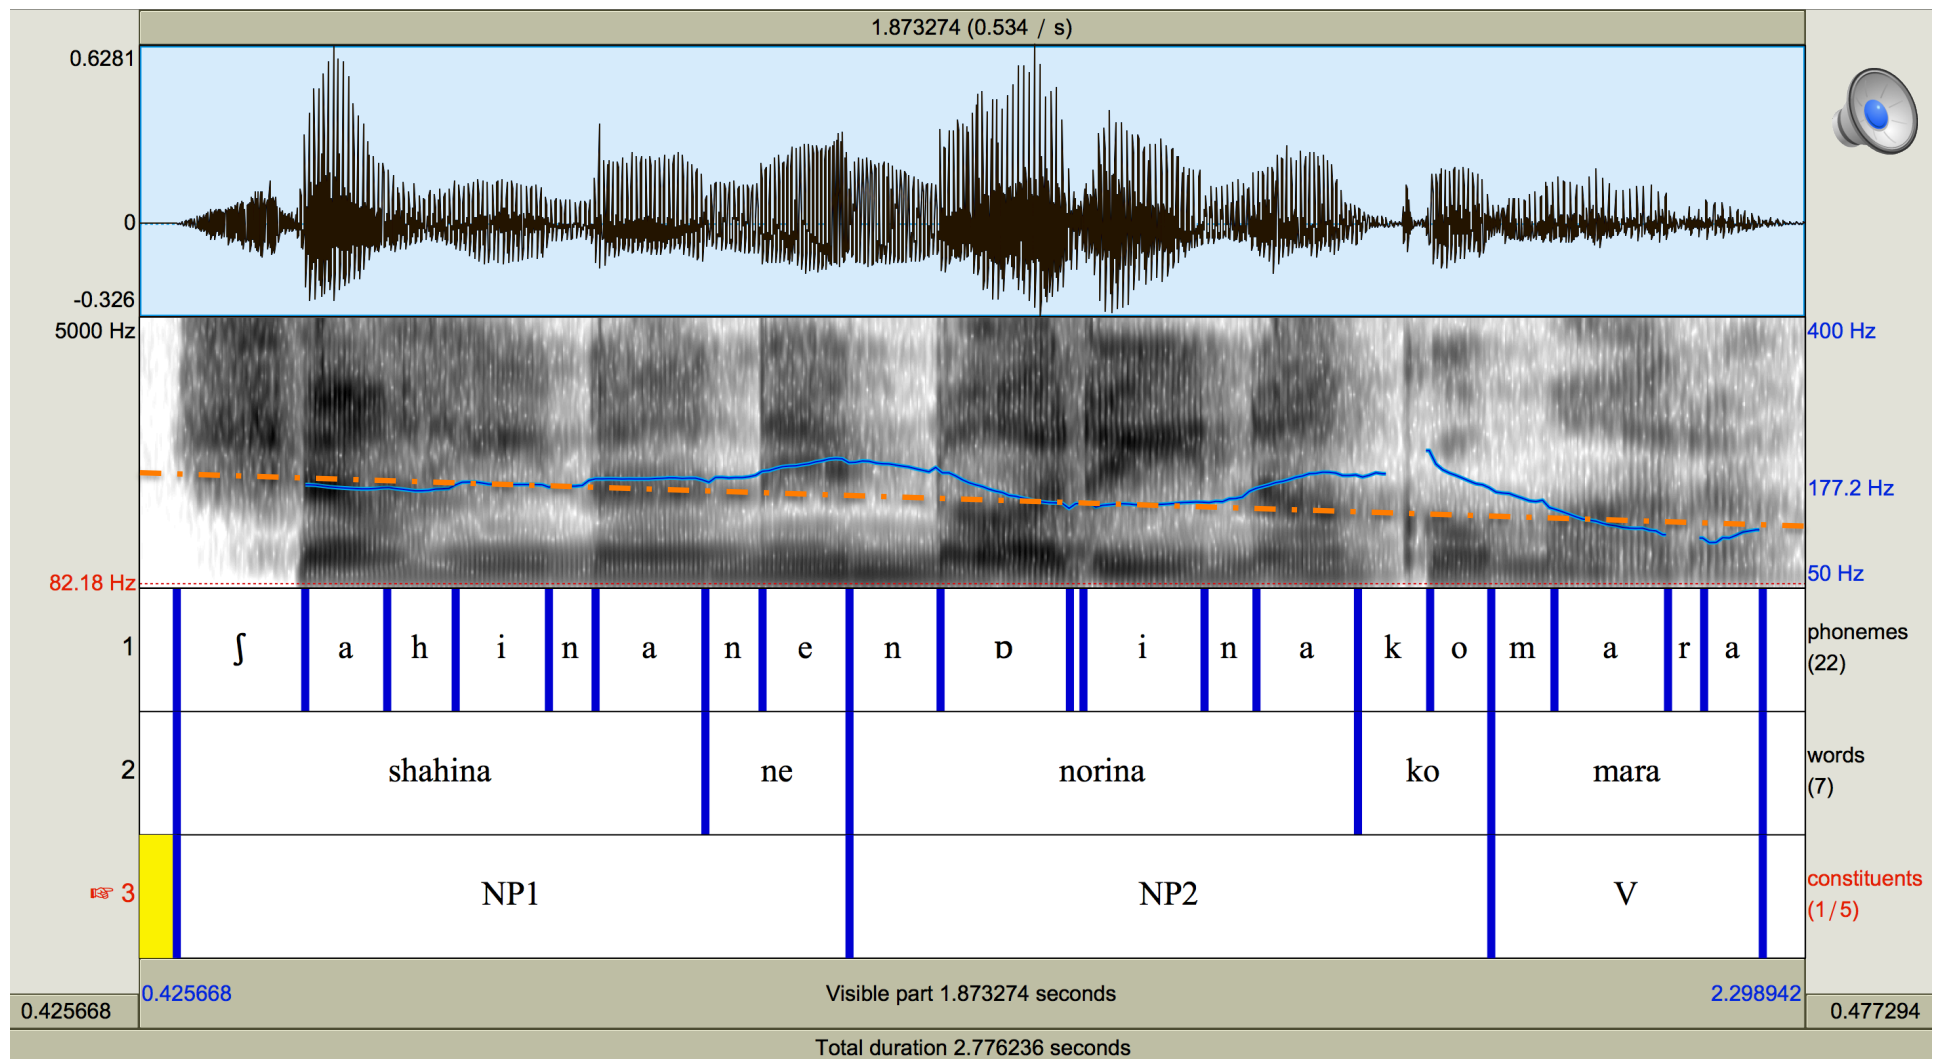

Prosodic Phrasing and Intonation (Patil et al. 2008)

- Every phonological phrase is indicated by:
 1. Low pitch accent: L*
 2. High boundary tone on the right edge of the rightmost prosodic word: (ω)H-
- *Clauses & declination*: the first p-phrase is higher than the following one, etc.

Focus and Intonation (Patil et al. 2008)

- Focused constituents follow the general L* H- pattern of p-phrases.
- However, focus is indicated by*
 - a steeper pitch rise
 - greater intensity
 - longer duration
- Focus inserts a high boundary to the right of the focused constituent: Focus]H_p
- Post focal pitch accentuation

- SOV with object focus
- Rising intonation at the end of the 2nd NP (object).
- H tone at the end of NP2 is high even if the object is assigned L* H-, no regular declination on NP2

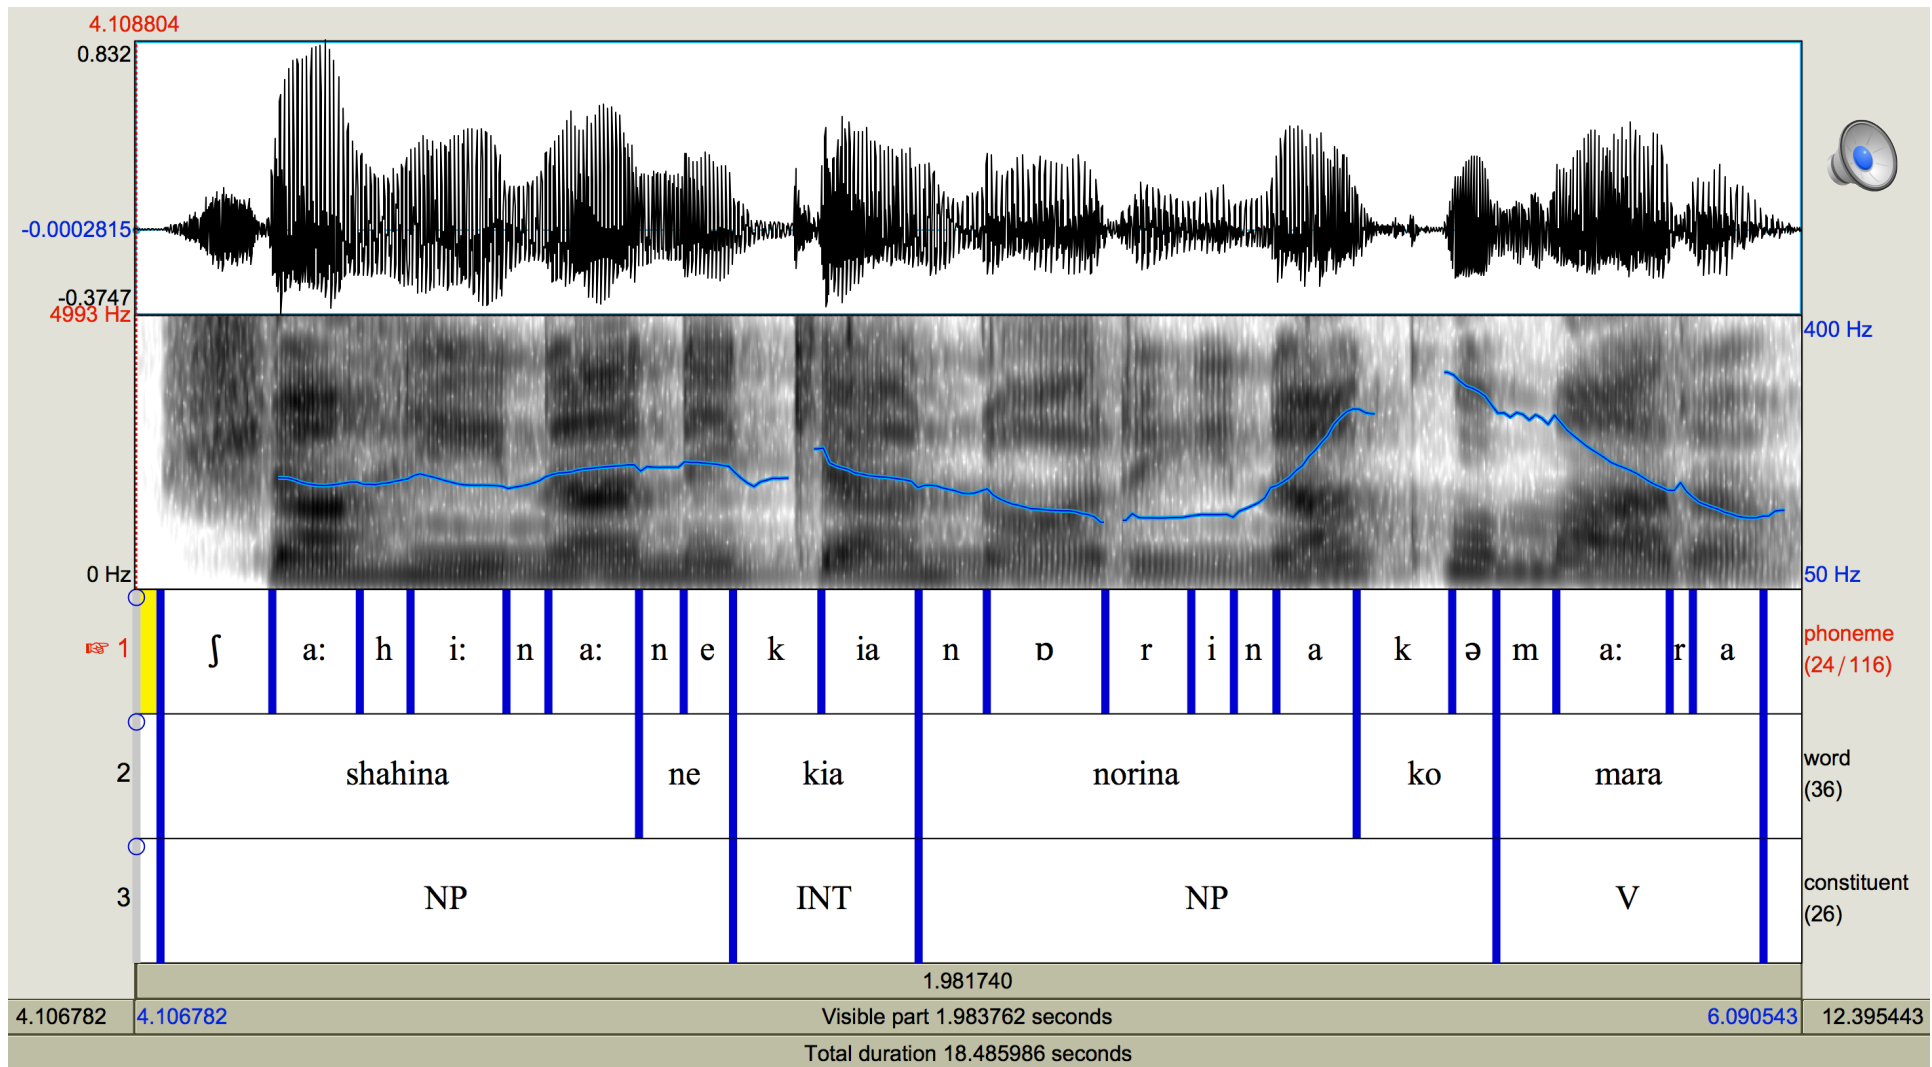

Focus and Questions

- The preverbal position is the default focus position (Butt & King 1996, 1997, Kidwai 2000).
- In wh-questions, the wh-word has focus intonation when it is functioning as a normal wh-question word (Butt, Jabeen & Bögel 2015).
- Contrastive focus is realised with higher pitch span (Jabeen, Bögel & Butt 2016).

Focus and *polar kyaa*

- Regardless of the position of *polar kyaa*
 - ANY of the constituents can be focused
 - They can either precede or follow *polar kyaa*
- The default intonation is with focus on the verb (that is what we have seen so far).
- When a constituent is focused
 - even if it precedes *polar kyaa*
 - it is open to questioning

- SOV with clause medial *polar kyaa*
- Object is focused and open to questioning
- Rising intonation at the end of the object
- But not at the end of the clause!

Object Focus: Able to question object

shahina=ne **kyaa** norinaa=ko maar-aa?
Shahina=Erg what Norina=Acc hit-Perf.M.Sg
'Did Shahina hit NORINA?'

nahiiN, **asim=ko** maar-aa
no Asim=Acc hit-Perf.M.Sg
'No, Asim.'

- SOV with clause medial *polar kyaa*
- Subject is focused and open to questioning.
- Rising intonation at the end of the object.
- But not at the end of the clause!

Subject Focus: Able to question object

shahina=ne **kyaa** norinaa=ko maar-aa?
Shahina=Erg what Norina=Acc hit-Perf.M.Sg
'Did SHAHINA hit Norina?'

nahiiN, **asim=ne** maar-aa
no Asim=Erg hit-Perf.M.Sg
'No, Asim did.'

Interim Summary

- Focus overlays whatever partitioning effect the *polar kyaa* has.
- The interaction between syntax, prosody, and interpretation is complex.
- Bhatt&Dayal's topicalization analysis is incompatible with the intonational facts.
- Unresolved questions:
 - What is the role of polar kyaa?
 - What is the significance of its different positions in the clause?

Questionnaire

- Questionnaire with acceptability judgment
(kyaa) NP (kyaa) NP (kyaa) V (kyaa)?
- Answers: SOV with contrasting
 1. Subject
 2. Object
 3. Verb
 4. Subject + object
 5. Subject + object + verb

Questionnaire Results

✓ = most acceptable

x = least acceptable

Contrast	Initial	Medial	Preverbal	Final
Subject	✓	✓	x✓	✓
Object	✓	✓	✓	✓
Verb	x	✓	x	x
Sub + Obj	x	x	x	x
Sub + Obj + V	x	x	x	✓

- Initial: subject and object individually open to questioning.
- Medial: all the constituents may be questioned/focused.
- Preverbal: not really possible. Reserved for wh-questions.
- Final: all the constituents may be questioned.

Corpus Study

- Script for Bollywood Movie *Socha Na Tha*
- Natural sounding speech, many questions

Question Type	Count	with kyaa	without kyaa
wh	339		
polar	204	24	180
alternative	13		
tag	44		
other	49		
Total	649		

polar kyaa	Count
initial	7
final	12
medial	5
Total	24

Corpus Study – Polar Questions

- Polar questions without *kyaa* are often straightforward information seeking questions.
- The ones with *kyaa* express an extra dimension of meaning:
 - surprise (this is also what is mentioned in the older grammars)
 - **possibility**
 - with final *kyaa* in particular, there is often a sense of "or what" – this also opens up worlds of possibilities

Clause Initial *polar kyaa* (*Socha Na Tha*)

kyaa ye sac hai?
what this true be.Pres.3Sg.
'Could this be true?'

kyaa maiN tum=se pyaar kar-taa huN?
what I you=Inst love do-Impf.M.Sg be.Pres.1.Sg.
'Is it possible I am in love with you?'

kyaa aap ... muj^h=se baat kar sak-te haiN?
what you.Pol I.Obl=Inst talk do can-Impf.M.Sg be.Pres.2.Pl.
'Could you talk to me?'

Clause Final *polar kyaa* (*Socha Na Tha*)

rok-ne=ko bol-uN **kyaa**
stop-Inf.M.Obl=Acc say-Subj.1.Sg what
'Should I tell (him) to stop (or what)?'

tu pagal hai **kyaa?**
you crazy be.Pres.3.Sg what
'Are you crazy or what?'

arre? sab kuc maiN hii kah-uN **kyaa?**
hey all something I only say-Subj.1.Sg what
'Hey, is it just up to me to say everything?'

Conclusion

- Data from intonation and the questionnaire does not bear out the topicalization/scope marking hypothesis.
 - Any constituent can be focused, whether it follows or precedes *polar kyaa*.
 - When it is focused, it is open for questioning, so *polar kyaa* is not indicating the scope of what can be questioned.
 - The questionnaire results do not provide a clear picture.
- This suggests we should be looking for alternative explanations.

Conclusion

- Alternative suggested by corpus study:
 - *polar kyaa* provides an extra dimension of meaning
 - it provides a modal force of possibility (*can/should/possible*)
- Future Work
 - Test this alternative hypothesis.
 - Understand how modal force interacts with polar questions.
